

Product Change Notification

Publish Date: 10/4/19

Effective Date: 11/1/19

Change Type: Product function

Products Affected

Model: Mission EP1-KP
SKU: EP1-KP-GN-SPL, EP1-KP-BK-SPL

Description of change: Beginning 11/1/19, all spring-loaded versions of the Mission EP1-KP expression pedal will omit the toe switch.

Details of change: The spring load option is designed to work with the Kemper Profiler auto bypass feature. This replaces the need for a physical switch with a virtual switch in software. When using this feature, there is no requirement for a hardware toe switch.

When the spring load is installed, operation of the hardware toe switch can require excessive pressure. Making it difficult to use and in rare cases the switch may be damaged. Since the switch is not required when using the auto-off feature, this change removes the hardware toe switch in spring loaded EP1-KP pedals.
